# Morningstar Medalist Core Conservative (15) Managed Account Portfolio

Preparation Date: 1-/%2/2023

**Research Pack** 

### About this research pack

A research pack for financial advisers using the Morningstar Medalist Core Conservative (15) Managed Account Portfolio. This pack shows analyst ratings and/or recommendations on the underlying portfolio holdings.

### About Morningstar

Morningstar is a leading provider of asset allocation, portfolio construction and investment research services with over 35 years' experience in the United States, Australia and other international markets. Morningstar advises and manages funds for superannuation funds, institutions, platform distributors, financial advisers and individuals.

Morningstar's disciplined investment approach delivers objective, cost effective and holistic solutions for our clients - helping them reach their financial goals. This long-term, valuation driven approach is underpinned by an emphasis on preserving capital and undertaking comprehensive fundamental analysis of global asset classes and securities.

This document is issued by Morningstar Investment Management Australia Limited (ABN 54 071 808 501, AFS Licence No. 228986) ('Morningstar'). Morningstar is the Responsible Entity and issuer of interests in the Morningstar investment funds referred to in this report. © Copyright of this document is owned by Morningstar and any related bodies corporate that are involved in the document's creation. #### Morningstar Medalist Rating<sup>™</sup> Morningstar Category<sup>™</sup> Manager Index 🖸 Gold

Bonds - Australia Bloomberg AusBond

### Morningstar Take Zunjar Sanzgiri 05/08/23

Vanguard Australian Fixed Income is an outstanding choice that provides diversified Australian bond exposure at a competitive price, particularly with the recent fee cut on the exchange-traded share class. The Bloomberg AusBond Composite 0+ Yr Index is representative of the overall opportunity set, a great fit as a foundational building block for one's fixed-income exposure.

# **Exchange-Traded Fund (ETF) Investment Detail Disclosure Statement**

### Morningstar Category<sup>™</sup>

Based on exposure to asset classes, investment sectors, the investment style and market-cap allocation, and the associated risk and return characteristics of the investment. The objective of the classification system is to provide groupings of investments which can be reasonably considered to be close investment alternatives and for which performance and other statistics such as fees are comparable.

### Morningstar Medalist Rating ™

The Morningstar Medalist Rating is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a riskadjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about the Medalist Ratings, including their methodology, please go to the Section titled "Methodology Documents and Disclosures" at https://shareholders.morningstar.com/investor relations/governance/Compliance--Disclosure/default.aspx

% Data Coverage The level of data completeness used to generate the overall rating. If the pillar is assigned directly or indirectly by analysts (pillar inheritance), the pillar will have complete data (i.e. 100%). If the pillar is assigned by machine learning algorithm, Morningstar counts the number of data points feeding both the positive and negative models and counts whether the vehicle has strategy-specific data available. A percentage is calculated per pillar. The overall % data coverage is then scaled by pillar weights. Morningstar will not produce a Medalist Rating with less than 80% data availability for algorithmically assigned pillar assessments.

Analyst-Driven Proportion Displays the weighted percentage of a vehicle's pillar ratings assigned directly or indirectly by analysts (pillar inheritance). For example, if the Parent and Process ratings are assigned directly or indirectly by analysts but the Process rating is assigned algorithmically, the Analyst-Driven Proportion for an actively managed vehicle would disclose that 55% of the pillar weight was assigned by analysts. In the case of a passively managed vehicle the Analyst-Driven Proportion would disclose that 90% of the pillar weight was assigned by analysts.

Morningstar Pillars The three Medalist Rating assessment pillars - People, Parent and Process - may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using Morningstar's machine learning algorithm. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars evaluated with Morningstar's machine learning algorithm are displayed with "Q" behind the Pillar name.

### Morningstar Rating<sup>™</sup>

Calculated for all funds in peer groups of comparable funds and that have at least a three-year performance history. The peer group is determined by the fund's Morningstar Category and Legal Type. The Morningstar Rating is based on the Morningstar Risk-Adjusted Return measure. The top 10% of funds in each peer group receive five stars, the next 22.5% receive four stars, the next 35% receive three stars, the next 22.5% receive two stars and the bottom 10% receive one star. The Overall Morningstar Rating for a fund is a weighted average of its three-, five- and ten-year Morningstar Ratings.

#### Morningstar Take

A summary of Morningstar's overall opinion of the manager's strategy and capabilities in the asset class. If Morningstar has not qualitatively reviewed the manager, the PDS Objective and Investment Strategy will appear in its place.

### **Pricing Information**

**Closing Market Price:** The price of the ETF's ordinary shares as at the close of trading day.

Net Asset Value (NAV): The value of the underlying investments in the portfolio on a per share basis. This is computed daily (or monthly) by dividing the total net assets by the total number of shares. The price of an ETF relates to its NAV, but ultimately is determined by supply and demand. Therefore, an ETF may trade at a discount, premium or at par to its NAV. The NAV will fall any time an ETF makes a distribution, regardless of the distribution amount. Because NAVs fluctuate daily/monthly with the market, meaningful performance assessment should be based on the NAV rather than just movements in the share price.

**Premium/Discount:** The premium or discount of the market price to the Net Asset Value (NAV) expressed as a percentage of the NAV. This is based on an average of month-end prices for the year. We calculate each month-end premium/discount figure, and then average out those 12 months for an average yearly premium/discount.

'Premium/Discount Avg%': Refers to the average monthly premium or discount over the time period specified.

'Premium/Discount High % and Low %': Refer to the highest and lowest premiums or discounts over the time period specified.

#### **Trading Information**

**52-Week High/Low:** The highest and lowest market close prices traded over the last 52 weeks.

Average Daily Shares Traded (1 Yr): The average daily traded number of shares over the trailing 52-week period.

**Shares Outstanding:** The number of ordinary shares outstanding in the market as at the specified date.

**Exchange:** The local stock exchange on which the ETF is listed and trading.

#### Performance

The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment.

**Growth of \$10,000:** The graph compares the growth of a \$10,000 investment (based on Close Market Price and NAV) with that of a capital market index chosen by the investment manager and with that of the average growth for all investments in the equivalent Morningstar Open-End Managed Funds peer group. The index is an unmanaged portfolio of specified securities. The index and the category average do not reflect any initial expenses however the category average returns are net of ongoing fees. A portfolio may differ significantly from the securities in the index.

Total return reflects performance without adjusting for sales

charges but is adjusted to reflect any capital re-organisation (eg. an issue of bonus shares) and all actual ongoing expenses. It also assumes reinvestment of distributions. If adjusted for sales charges and the effects of taxation, the performance quoted would be reduced. Trailing returns for periods over one year are annualised.

Monthly Trading Volume (Millions): The total number of ordinary shares which has traded during each calendar month.

#### **Risk Measures (NAV)**

**Standard Deviation:** Statistical measure of the volatility of the fund's return.

**Sharpe Ratio:** A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

**Tracking Error %:** Tracking Error is a measure of the volatility of excess returns relative to a benchmark.

Information Ratio: Information Ratio is a risk-adjusted performance measure. The Information Ratio is a special version of the Sharpe Ratio in that the benchmark doesn't have to be the risk-free rate.

**Alpha:** A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by Beta. A positive Alpha figure indicates the portfolio has performed better than its Beta would predict.

**Beta:** A measure of a fund's sensitive to market movements. If beta is greater than one, movements in value of the fund that are associated with movements in the value of the benchmark tend to be amplified.

### Fees

**Investment Management Fee % pa:** This is the amount as a percentage of the investor's assets that the investment manager is entitled to charge an investor each year.

**Total Cost Ratio (Prospective):** Represents the forward-looking figure encompassing the total non-discretionary fees and costs associated with managing and administering collective investment products.

#### Portfolio

Morningstar Style Box: The Morningstar Equity Style Box<sub>M</sub> For equity ETFs the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income ETFs the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitive as measured by a bond's duration (short, intermediate or long).

**Top 20 Holdings:** The largest equity exposures of an ETF's portfolio. Portfolio holdings information is based on the most recent information available to Morningstar.

Top 5 World Regions: An ETF's largest regional exposures.

Market Cap Breakdown: The ETF's equity investment exposure broken down by market capitalisation (giant, large, medium, small, or micro).

### Morningstar Take by Shamir Popat 18 Mar 2023

The Barrow Hanley Global Value Equity strategy retains our highest conviction for its disciplined execution of a well-established pragmatic value philosophy and process run by a best-in-class team. Strategy lead Brad Kinkelaar continues to run the portfolio assisted by three comanagers, TJ Carter, David Ganucheau, and Cory Martin who all have 19 plus years of experience. All members are well-versed in Barrow Hanley's approach to value investing and have spent considerable time working together. The highly regarded portfolio managers are supported by a well-resourced analyst network that scours the investable universe for opportunities. We like the collaborative culture, and sensible succession planning mitigates key-person risk. Robust bottom-up fundamental analysis underpins this strategy as the team seeks to identify companies with attractive valuations that other investors fail to recognise. Another appealing hallmark is the portfolio tilting between defensive value and cyclical value positions as the market evolves rather than being wedded to a single value substyle. Investors should note that portfolio rotation is an outcome of the bottom-up selection rather than an explicit macro call. Owing to the natural tilting of the portfolio, deep-value rallies may leave this strategy behind owing to the portfolio holding defensive value names as seen in 2016 and 2021. This process results in a diversified 50- to 70-stock portfolio with a true investor mindset; commensurately, active share is high and turnover low. The underlying strategy has been running since 2010 and has performed in line with the MSCI World Index and well ahead of most of its value peers, given its ability to tilt towards defensive value. This is a commendable long-term performance profile. Barrow Hanley's disciplined stock selection skills driving a dynamic weighting to defensive and cyclically oriented names continues to deliver through the cycle.

#### Morningstar Take by Callan Maclennan 28 Nov 2023

Bentham Global Income stands out with its unique and broad approach, led by a highly skilled team, positioning it as an excellent choice for those seeking a higher-risk fixed-interest exposure. Bentham's investment team is relatively small locally but remains strongly led by managing director and portfolio manager Richard Quin, who continues at the helm alongside founding partners Nik Persic and Mark Fabry. The three senior members are supported by a dedicated team of eight with a blend of experience. This includes a mix of investment and data analysts, with three also sharing dealing duties. An arrangement with the former Credit Suisse Credit Investments Group now under the ownership of UBS also brings institutional-grade analysis for its largest allocations in high yield and loans. Bentham's focus is on identifying relative value across sectors and the capital structure, relying on both its top-down views and bottom-up research. Bentham seeks undervalued sectors and sectors where it is compensated for the risks. This has seen the manager make some significant shifts in credit sector and overall credit beta allocations over time, as well as changes in interest-rate positioning, which is reflective of the manager's high-conviction approach. To assist with this process, Bentham has invested heavily in visualization tools and other portfolio management systems. However, the manager continues to lack a dedicated risk oversight function, which is noteworthy given the growing allocations to derivatives in the portfolio. Bentham also tends to carry a higher credit allocation versus peers, which means the defensive characteristics of a typical bond fund aren't always present and thus can experience higher volatility at times. One of the attractive features of the strategy, however, is the capacity of portfolio hedges to provide some protection to returns in weaker markets. Unlike previous years where tail risk management was rewarded, the hedging book was a drag on performance over the 12 months to Sept. 30, 2023. While Bentham's 0.77% fee sits above peers, Bentham does manage across a broader global credit universe than most of its Morningstar Category peers, which requires

### Morningstar Take by Stephen Welch 04 Jul 2023

Seasoned leaders steer American Funds New Perspective using a time-tested method targeting firms benefiting from global trade. Its cheapest U.S., Luxembourg, and Australia share classes have a Morningstar Medalist Rating of Gold, while pricier shares land at Silver and Bronze. The strategy's proven multimanager approach sets it up for long-term success. Capital Group, the parent of American Funds, splits the strategy's \$120 billion asset base into individual sleeves among nine named managers, a handful of undisclosed up-and-comers, and two analyst-run research sleeves. Two principal investment officers help ensure the fund's sleeves meld together into a diversified global portfolio. The managers run their sleeves of the overall portfolio as they see fit but must stick to companies that receive at least 25% of their revenues from outside their home region and have at least a \$3 billion market-cap float at the time of purchase. The team here is one of Capital's most stable, and its makeup is impressive. Five of the strategy's nine managers have served together since December 2005, with most-tenured Rob Lovelace serving more than two decades. While potential retirements loom in the coming years, Capital won't be caught off guard. The firm recently named Barbara Burtin and Patrice Collette as managers in December 2021. Burtin and Collette both have been managing a small portion of the strategy as undisclosed managers for three years each. Behind the management team sits a deep and talented analyst team, which consists of more than 100. The fund's now 300-plus stock portfolio has typically gotten ahead by protecting capital in down markets and keeping risk in check. Its trailing five-, 10-, 15-, and 20-year returns through May 2023 all ranked in the global large-growth Morningstar Category's top quartile or better. In 2022's market pullback, the strategy's 25.8% loss, was 2.1 and 2.8 percentage points less than the category average and the MSCI ACWI Growth, respectively. It helps that Capital Group is an excellent steward of investor's capital. Most assets sit in the peer group's cheapest decile. This is a promising global equity option, and there's little reason

### Morningstar Rating

\*\*\*\* Out of 58 funds as at 30 Nov 2023

### Morningstar Take by Zunjar Sanzgiri 02 Dec 2023

IShares Global Bond Index is a decent strategy that offers cost-efficient exposure to global fixed interest. The strategy benefits from BlackRock's legacy of indexing expertise and the integration of sophisticated systems for seamless execution. It tracks the Bloomberg Global Aggregate Bond Index (AUD Hedged), a well-diversified global government- and corporate-bond benchmark, which is emulated by using a stratified sampling approach. The well-resourced team at iShares efficiently replicates the index's duration, yield, and average credit quality. The portfolio's tracking error has been maintained within a tight range of the benchmark since this vehicle's inception. Government bonds make up more than half of the sector exposure, with much of the remainder in investment-grade corporates and securitized debt. Security-specific credit risk is mitigated by diversification across many high-quality issuers, and the dominant government exposure bolsters the fund in times of market volatility. On the flip side, it is also likely to lag more aggressively positioned rivals when credit markets rally. The fund's duration has been consistently higher than that of its average peer, which implies that the fund returns are more sensitive to interest rate movements. Bound to an index, the fund is susceptible to a higher interest-rate and inflationary regime, a scenario that has played out over the past two years. On the other hand, active managers with quality research and an analytical edge can use their leeway effectively to add value in the disparate global-bond universe, and this materializes in our view of the process. That said, the strategy works well as a defensive option as even active managers do not always get the duration calls right. As such, we think iShares Global Bond Index is a sound choice as a one-stop-shop fund considering the low price and experienced management. The primary vehicle from which this strategy's pillar ratings are derived is iShares Global Bond Index, ticker 18200.

Tax-Adj Return %

### Morningstar Take by David Little 04 Mar 2023

Janus Henderson Tactical Income utilises the manager's value-oriented process in a more flexible absolute return-oriented manner, now managed by a stable and experienced team. Its leader Jay Sivapalan has been with the firm for more than two decades and has been able to rebuild a flat and cohesive team culture since he assumed lead responsibility almost five years ago. While Sivapalan is the clear key individual, he is well supported by Shan Kwee, who impresses not only through his credit oversight responsibility but also through his growing leadership, having joined the team in 2018. Sivapalan, Kwee as well as highly experienced investment strategist Frank Uhlenbruch, are supported by a team of analysts with a mix of experience and focus, that has increased in size in recent times. Recently joined environmental, social, and governance strategist Liz Harrison is also a strong senior addition. The strategy offers more flexibility and less interest-rate risk relative to a typical Australian bond offering, courtesy of its split index (50/50 AusBond Bank Bills and AusBond Composite indexes). In addition to the traditional AusBond Composite Index universe (Australian government and government-related bonds, credit, and securitised instruments) the portfolio can invest into riskier sectors like emerging markets, loans, and high yield, though the team has historically used these exposures sparingly. The portfolio can also invest in hybrids opportunistically. The strategy's structurally lower duration was beneficial during the 2021 and 2022 rising interest-rate environments relative to Morningstar Category peers. This does mean the portfolio is expected to provide less defensive cushion in periods where equity markets sell off. The quality of the Janus Henderson capability makes this a strong choice for investors seeking a more flexible absolute return approach.

# MFG Core Infrastructure MGF9182AU

Morningstar Medalist Rating Morningstar Category **Morningstar Pillars Silver** Fouity Global Infrastructure - Parent 
Average Process 
Above Average Currency Hedged People 

Above Average Morningstar Take by Michael Malseed 07 Jul Performance 30 Nov 2023 2023 MFG Core Infrastructure continues to appeal, given its

low-cost access point to Magellan's high-quality investment research. The strategy leverages Magellan's proprietary infrastructure universe as the bedrock of the process. To be considered for inclusion, a company must possess an asset that is essential for the efficient functioning of society and have earnings that aren't overly affected by competition, commodity prices, or sovereign risks. The final 70-100 stock portfolio is constructed systematically with weights based on market cap, albeit capped at 3%, and rebalanced monthly. It ultimately looks different from the FTSE Developed Core 50/50 Index with a material overweighting in defensive utilities and lower commodity price sensitivity. An active overlay ensures holdings are monitored continuously for real-time risks to remove troubled holdings. Portfolio manager David Costello helms this strategy under the guidance and support of head of infrastructure Gerald Stack and the well-regarded Magellan infrastructure team. This group has been relatively insulated from broader disruptions to the Magellan equities business, and they remain well incentivised and motivated. Key-person risk can't be completely discounted, but a flat research structure combined with a systematic portfolio construction process on this strategy is reassuring. Despite a defensive tilt, the strategy has beaten its Morningstar Category index over the trailing five- and 10-year periods to June 2023 while exhibiting lower risk and greater downside protection. The blend of a thoughtful active infrastructure universe implemented in a low-turnover systematic fashion is sensible. That approach also facilitates an attractive 0.50% annual base fee, on par with passive offerings. That low cost, combined with diligently researched global infrastructure, makes this an appealing proposition.

# MFS Global Equity Trust II - I Hedged ETL3984AU

Morningstar Medalist Rating Morningstar Category Gold 23 Fauity World - Currency

Morningstar Take by Tim Wong 31 Jan 2023

Hedged

A simple, commonsense approach enacted by esteemed portfolio managers keeps MFS Global Equity at the forefront of the pack. Comanagers Roger Morley and Ryan McAllister uphold a longstanding tradition of investing in companies with a sustainable growth outlook courtesy of a substantive competitive advantage. Both are long-standing employees; Morley has been established as a fine investor here for many years. McAllister's transition to comanager in 2016 has been as smooth as could be hoped; he's steadily broadened his knowledge across industries and worked cohesively with Morley. Further, we think the duo utilise MFS' broader analyst team very effectively, with a longstanding perspective and understanding of how company and industry-level views have evolved engendering confidence in the research process and highlighting the laudably patient outlook. The methodical approach is straightforward, disciplined and willing to ignore index weights, as seen in its long-standing skew to industrials and healthcare companies at the expense of commodities and tech. That said, it hasn't all been plain sailing. This strategy has encountered some stock-specific stumbles as the emphasis on valuation led to owning some companies facing more concerted cyclical pressures than expected. While tension in balancing quality and value is inevitable, we are nonetheless heartened that more borderline prospects have generally been among the smaller sized positions-a tribute to sensible portfolio construction-and note that the fastest-growing firms that have been among key missed opportunities at times have never been this strategy's calling card. The market's abandonment of high-flying growth stocks in 2022 was a reminder that styles can shift from favour, and the team has continued to identify plenty of longer-term winners in other industries. MFS also has a commendable history of putting clients first when it comes to managing capacity, and its fees are also advantageous. Ultimately, we maintain the utmost confidence in MFS Global Equity as an outstanding core option. The primary vehicle from which this strategy's pillar ratings are derived is MFS Hedged Global Equity Trust W, ticker 1232

## **Managed Fund Investment Detail Disclosure Statement - Advanced**

#### Quick Stats

Morningstar Category  $^{\mathrm{\tiny M}}$ 

Based on exposure to asset classes, investment sectors, the investment style and market-cap allocation, and the associated risk and return characteristics of funds. The objective of the classification system is to provide groupings of funds which can be reasonably considered to be close investment alternatives and for which performance and other statistics such as fees are comparable.

### Morningstar Medalist Rating ™

Is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about the Medalist Ratings, including their methodology, please go to the Section titled "Methodology Documents and Disclosures"

https://shareholders.morningstar.com/investorrelations/governance/Compliance--Disclosure/default.aspx

% Data Coverage: the level of data completeness used to generate the overall rating. If the pillar is assigned directly or indirectly by analysts (pillar inheritance), the pillar will have complete data (i.e. 100%). If the pillar is assigned by machine learning algorithm, Morningstar counts the number of data points feeding both the positive and negative models and counts whether the vehicle has strategy-specific data available. A percentage is calculated per pillar. The overall % data coverage is then scaled by pillar weights. Morningstar will not produce a Medalist Rating with less than 80% data availability for algorithmically assigned pillar assessments.

Analyst-Driven Proportion: displays the weighted percentage of a vehicle's pillar ratings assigned directly or indirectly by analysts (pillar inheritance). For example, if the Parent and Process ratings are assigned directly or indirectly by analysts but the Process rating is assigned algorithmically, the Analyst-Driven Proportion for an actively managed vehicle would disclose that 55% of the pillar weight was assigned by analysts. In the case of a passively managed vehicle the Analyst-Driven Proportion would disclose that 90% of the pillar weight was assigned by analysts.

Morningstar Pillars: The three Medalist Rating assessment pillars - People, Parent and Process - may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirectly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using Morningstar's machine learning algorithm. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars evaluated with Morningstar's machine learning algorithm are displayed with "Q" behind the Pillar name.

#### Morningstar Rating <sup>™</sup>

The rating is calculated for funds with at least a three-year

history based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance. The top 10% of funds in each peer group receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The peer group is determined by the fund's Morningstar Category and Legal Type. The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its three-, five- and ten-year Morningstar Rating metrics.

#### Morningstar Take

The Morningstar Take is a summary of Morningstar's overall opinion of the fund manager's strategy and capabilities in the asset class. If Morningstar has not qualitatively reviewed the manager, the PDS Objective and Fund Investment Strategy will appear in its place.

#### Performance

The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment.

Growth of \$10,000: The graph compares the growth of \$10,000 in a fund with that of a capital market index chosen by Morningstar and with that of the average growth for all funds in its Morningstar peer group. The index is an unmanaged portfolio of specified securities. The index and the category average do not reflect any initial expenses however the category average returns are net of ongoing fees. A fund's portfolio may differ significantly from the securities in the index.

*Quartile Rank:* The graph represents the fund's total return percentile rank among funds in the same peer group. The black bar on the graph represents the quartile in which the fund-performance ranking falls. If the top quarter of the graph is shaded, for example, the fund performed among the top 25% of its category that year.

Total return reflects performance without adjusting for sales charges but is adjusted to reflect all actual ongoing fund expenses and assumes reinvestment of distributions. Growth return is the percentage change in the scheme's soft close exit price adjusted for any capital re-organisation. Income return is the total return less growth return and reflects the level of distributions from a fund. For Australian funds, performance is not adjusted for taxation. For New Zealand PIE funds, tax credits are added back to the performance. For New Zealand non-PIE funds returns are calculated net of tax. Trailing returns for periods over one year are annualised.

#### **Risk Measures**

*Standard deviation*: Statistical measure of the volatility of the fund's return.

Sharpe ratio: A risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance.

Alpha: A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. A positive Alpha figure indicates the portfolio has performed better than its beta would predict.

*Beta*: A measure of a fund's sensitive to market movements. If beta is greater than one, movements in value of the fund that are associated with movements in the value of the benchmark tend to be amplified.

*R-Squared*: : Measures the relationship between a portfolio and its benchmark. It can be thought of as a percentage from 1 to 100. R-squared can be used to ascertain the significance of a particular beta or alpha. Generally, a higher R-squared will indicate a more useful beta figure.

### Fees

Total Cost Ratio (Prospective): Represents the

forward-looking figure encompassing the total non-discretionary fees and costs associated with managing and administering collective investment products.

*Buy-Spread/Sell-Spread:* A transaction cost incurred by the investor that reflects an estimated transaction costs incurred by the fund in dealing with the underlying securities as shown in the PDS.

Performance Fee Costs: Performance Fee shown in the "Fees and Costs Summary" table in the PDS. It is intended as a representation of potential on-going performance fee expenses and is a calculated average using the performance fee costs from the last five financial years (or as many as the performance fee was applicable). This amount includes the Performance Fee costs arising from Interposed Vehicles.

Investment Management Fee: The Management Fee (MIS) and Investment Fees (Super) shown in the PDS, that is attributable to investment management, which are fees and costs an investor would expect to be charged over the year. This excludes the costs arising from interposed vehicles.

Administration Fees and Costs (Super Funds only): shown in the "Fees and Costs Summary" table in the PDS. This includes OTC Derivative Costs deemed to be Administration costs.

#### Portfolio

*Composition:* The graph represents a breakdown of the fund's holdings into general investment classes based on surveyed data provided by the fund manager.

Morningstar Style Box: For equity funds the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend or growth). For fixed-income funds the vertical axis shows the average credit quality of the bonds owned, and the horizontal axis shows interest rate sensitive as measured by a bond's duration (short, intermediate or long).

*Top Holdings:* The largest exposure of eligible securities within a fund's portfolio. Portfolio holdings information is based on the most recent information available to Morningstar, and eligible securities are defined by Morningstar's Global Methodology team, and will exclude positions not considered core to the portfolio.

*Top 5 Sector Weightings:* The Morningstar sector structure divides the stock universe into 129 industries ranging from semiconductors to medical equipment. These industries are classified into 41 industry groups, which are then used to construct 12 separate sectors.

*Top 5 Countries*: The largest geographical exposure of a fund's stock assets. Country assignments are based on the primary exchange where each stock is traded.

### Operations

*Minimum Initial Investment:* The smallest investment amount accepted by the product to establish a new account.

*Minimum Additional Investment:* The amount required to make subsequent investments in the product.

*Minimum Withdrawal:* The smallest amount that can be taken out of the product at one time.

*Switching Allowed:* If it's possible to switch between investments in the same offer document.

Distributions Frequency: The number of times per year a fund intends to distribute for the life of the offer document.
